e-mail

1 Problem Statement

- What is the problem?
- Why is it challenging?
- Where and to whom might it be useful?
- How does it relate to previous techniques?
- You might include an example picture here to indicate the effect you want to achieve.

2 Methodology

- How do you plan to address the problem?
- Point out the main algorithms/papers your work will be based on [1].
- What is your contribution? Add something new to the previous approaches. How will your approach be different?
- Structure the workload into smaller work packages/milestones, which you successively implement to complete the final project.
- Indicate who might/will work on which work package.
