Author Guidelines for GCPR Submission	1
Anonymous GCPR submission	2
Paper ID ***	3
<b>Abstract.</b> The abstract should summarize the contents of the paper and should contain at least 70 and at most 300 words. It should be set in 9-point font size and should be inset 1.0 cm from the right and left margins	4 5 6 7
1 Introduction	8
Please follow the steps outlined below when submitting your manuscript $^1$ .	9
1.1 Language	10
All manuscripts must be in English.	11
1.2 Paper length	12
The maximum allowed paper length is 10 pages. Overlength papers will simply not be reviewed. This includes papers where the margins and formatting are deemed to have been significantly altered from those laid down by this style guide. The reason such papers will not be reviewed is that there is no provision for supervised revisions of manuscripts. The reviewing process cannot determine the suitability of the paper for presentation in 10 pages if it is reviewed in 12.	13 14 15 16 17
1.3 Dual submission	19
By submitting a manuscript to GCPR, the author(s) assert(s) that it has not been previously published in substantially similar form. Furthermore, no paper which contains significant overlap with the contributions of this paper either has been or will be submitted during the GCPR 2013 review period to either a journal or a conference.  If there are any papers that may appear to the reviewers to violate this condition, then it is your responsibility to (1) cite these papers – preserving anonymity as described in section 2 of this example paper, (2) argue in the body of your paper why your GCPR paper is nontrivially different from these concurrent submissions, and (3) include anonymized versions of those papers in	20 21 22 23 24 25 26 27 28

<sup>&</sup>lt;sup>1</sup> These instructions have been adapted from DAGM-OAGM 2012.

## 1.4 Supplemental Material

Authors may optionally upload supplemental material. Typically, this material might include result videos that cannot be included in the main paper, anonymized related submissions to other conferences and journals, and appendices or technical reports containing extended proofs and mathematical derivations that are not essential for understanding of the paper. Note that the contents of the supplemental material should be referred to appropriately in the paper, and that reviewers are not obliged to look at the submitted material.

All supplemental material must be zipped or tarred into a single file. There is a 30MB limit on the size of this file. The deadline for supplemental material is three days after the main paper deadline. To limit the load on the servers, we ask authors to either submit the supplemental material well before the main paper deadline, or after the main paper deadline.

# 1.5 Line numbering

All lines should be numbered, as in this example document. This makes reviewing more efficient, because reviewers can refer to a line on a page. If you are preparing a document using a non-LATEX document preparation system, please arrange for an equivalent line numbering.

#### 1.6 Mathematics

Please number all of your sections and displayed equations. Again, this makes reviewing more efficient, because reviewers can refer to a line on a page. Also, it is important for readers to be able to refer to any particular equation. Just because you didn't refer to it in the text doesn't mean some future reader might not need to refer to it. It is cumbersome to have to use circumlocutions like "the equation second from the top of page 3 column 1". (Note that the line numbering will not be present in the final copy, so is not an alternative to equation numbers). Some authors might benefit from reading Mermin's description of how to write mathematics: http://www.cvpr.org/doc/mermin.pdf.

# 2 Blind review

Many authors misunderstand the concept of anonymizing for blind review. Blind review does not mean that one must remove citations to one's own work—in fact it is often impossible to review a paper unless the previous citations are known and available.

Blind review means that you do not use the words "my" or "our" when citing previous work. That is all. (But see below for techreports).

Saying "this builds on the work of Lucy Smith [1]" does not say that you are Lucy Smith, it says that you are building on her work. If you are Smith and Jones, do not say "as we show in [7]", say "as Smith and Jones show in [7]" and at the end of the paper, include reference 7 as you would any other cited work.

An example of a bad paper:

71	An analysis of the frobnicatable foo filter.	71
72	In this paper we present a performance analysis of our previous paper	72
73	[1], and show it to be inferior to all previously known methods. Why the	73
74	previous paper was accepted without this analysis is beyond me.	74
75	[1] Removed for blind review	75
76	An example of an excellent paper:	76
77	An analysis of the frobnicatable foo filter.	77
78	In this paper we present a performance analysis of the paper of Smith	78
79	[1], and show it to be inferior to all previously known methods. Why the	79
80	previous paper was accepted without this analysis is beyond me.	80
81	[1] Smith, L and Jones, C. "The frobnicatable foo filter, a fundamental	81
82	contribution to human knowledge". Nature 381(12), 1-213.	82
83	If you are making a submission to another conference at the same time,	83
84	which covers similar or overlapping material, you may need to refer to that	84
85	submission in order to explain the differences, just as you would if you had	85
86	previously published related work. In such cases, include the anonymized parallel	86
87	submission [4] as additional material and cite it as	87
88	1. Authors. "The frobnicatable foo filter", BMVC 2010 Submission ID	88
89	324, Supplied as additional material bmvc10.pdf.	89
90	Finally, you may feel you need to tell the reader that more details can be	90
91	found elsewhere, and refer them to a technical report. For conference submis-	91
92	sions, the paper must stand on its own, and not require the reviewer to go to	92
93	a techreport for further details. Thus, you may say in the body of the paper	93
94	"further details may be found in [5]". Then submit the techreport as additional	94
95	material. Again, you may not assume the reviewers will read this material.	95
96	Sometimes your paper is about a problem which you tested using a tool which	96
97	is widely known to be restricted to a single institution. For example, let's say	97
98	it's 1969, you have solved a key problem on the Apollo lander, and you believe	98
99	that the GCPR audience would like to hear about your solution. The work is a	99
100	development of your celebrated 1968 paper entitled "Zero-g frobnication: How	100
101	being the only people in the world with access to the Apollo lander source code	101
102	makes us a wow at parties", by Zeus.	102
103	You can handle this paper like any other. Don't write "We show how to	103
104	improve our previous work [Anonymous, 1968]. This time we tested the algorithm	104
105	on a lunar lander [name of lander removed for blind review]". That would be silly and would immediately identify the authors. Instead write the following:	105
106	silly, and would immediately identify the authors. Instead write the following:	106
107	We describe a system for zero-g frobnication. This system is new because	107
108	it handles the following cases: A, B. Previous systems [Zeus et al. 1968]	108
109	didn't handle case B properly. Ours handles it by including a foo term	109
110	in the bar integral.	110

111

•••

4	GCPR 2013 Submission $\#^{***}$ . CONFIDENTIAL REVIEW COPY.

112	The proposed system was integrated with the Apollo lunar lander,	112
113	and went all the way to the moon, don't you know. It displayed the	113
114	following behaviours which show how well we solved cases A and B:	114
115	As you can see, the above text follows standard scientific convention, reads bet-	115
116	ter than the first version, and does not explicitly name you as the authors. A	116
117	reviewer might think it likely that the new paper was written by Zeus, but can-	117
118	not make any decision based on that guess. He or she would have to be sure that	118
119	no other authors could have been contracted to solve problem B.	119
120		120
121	FAQ: Are acknowledgements OK? No. Please omit acknowledgements in your	121
122	review copy; they can go in the final copy.	122
123	3 Manuscript Preparation	123
124	This is an edited version of Springer LNCS instructions adapted for GCPR 2013	124
125	first paper submission.	125
126	You are strongly encouraged to use $\LaTeX 2_{\varepsilon}$ for the preparation of your	126
127	camera-ready manuscript together with the corresponding Springer class file	127
128	llncs.cls.	128
129	We would like to stress that the class/style files and the template should not	129
130	be manipulated and that the guidelines regarding font sizes and format should	130
131	be adhered to. This is to ensure that the end product is as homogeneous as	131
132	possible.	132
133	3.1 Printing Area	133
134	The printing area is $122 \text{ mm} \times 193 \text{ mm}$ . The text should be justified to occupy	134
135	the full line width, so that the right margin is not ragged, with words hyphenated	135
136	as appropriate. Please fill pages so that the length of the text is no less than	136
137	180 mm.	137
138	3.2 Layout, Typeface, Font Sizes, and Numbering	138
139	Use 10-point type for the name(s) of the author(s) and 9-point type for the	139
140	address(es) and the abstract. For the main text, please use 10-point type and	140
141	single-line spacing. We recommend using Computer Modern Roman (CM) fonts,	141
142	Times, or one of the similar typefaces widely used in photo-typesetting. (In these	142
143	typefaces the letters have serifs, i.e., short endstrokes at the head and the foot	143
144	of letters.) Italic type may be used to emphasize words in running text. Bold	144
145	type and underlining should be avoided. With these sizes, the interline distance	145
146	should be set so that some 45 lines occur on a full-text page.	146

**Headings.** Headings should be capitalized (i.e., nouns, verbs, and all other words except articles, prepositions, and conjunctions should be set with an initial capital) and should, with the exception of the title, be aligned to the left. Words joined by a hyphen are subject to a special rule. If the first word can stand alone, the second word should be capitalized. The font sizes are given in Table 1.

**Table 1.** Font sizes of headings. Table captions should always be positioned *above* the tables. The final sentence of a table caption should end without a full stop

Heading level	Example	Font size and style
Title (centered)	Lecture Notes	* /
1st-level heading 2nd-level heading	1 Introduction 2.1 Printing Area	12 point, bold 10 point, bold
3rd-level heading	<b>Headings.</b> Text follows	10 point, bold
4th-level heading	Remark. Text follows	10 point, italic

Here are some examples of headings: "Criteria to Disprove Context-Freeness of Collage Languages", "On Correcting the Intrusion of Tracing Non-deterministic Programs by Software", "A User-Friendly and Extendable Data Distribution System", "Multi-flip Networks: Parallelizing GenSAT", "Self-determinations of Man".

Lemmas, Propositions, and Theorems. The numbers accorded to lemmas, propositions, and theorems etc. should appear in consecutive order, starting with the number 1, and not, for example, with the number 11.

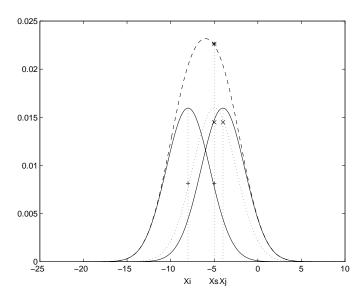

#### 3.3 Figures and Photographs

Please produce your figures electronically and integrate them into your text file. For LATEX users we recommend using package graphicx or the style files psfig or epsf.

Check that in line drawings, lines are not interrupted and have constant width. Grids and details within the figures must be clearly readable and may not be written one on top of the other. Line drawings should have a resolution of at least 800 dpi (preferably 1200 dpi). For digital halftones 300 dpi is usually sufficient. The lettering in figures should have a height of 2 mm (10-point type). Figures should be scaled up or down accordingly. Please do not use any absolute coordinates in figures.

Figures should be numbered and should have a caption which should always be positioned *under* the figures, in contrast to the caption belonging to a table, which should always appear *above* the table. Please center the captions between the margins and set them in 9-point type (Fig. 1 shows an example). The distance

between text and figure should be about 8 mm, the distance between figure and caption about 5 mm.

**Fig. 1.** One kernel at  $x_s$  (dotted kernel) or two kernels at  $x_i$  and  $x_j$  (left and right) lead to the same summed estimate at  $x_s$ . This shows a figure consisting of different types of lines. Elements of the figure described in the caption should be set in italics, in parentheses, as shown in this sample caption. The last sentence of a figure caption should generally end without a full stop

If possible (e.g. if you use LATEX) please define figures as floating objects. LATEX users, please avoid using the location parameter "h" for "here". If you have to insert a pagebreak before a figure, please ensure that the previous page is completely filled.

## 3.4 Formulas

Displayed equations or formulas are centered and set on a separate line (with an extra line or halfline space above and below). Displayed expressions should be numbered for reference. The numbers should be consecutive within each section or within the contribution, with numbers enclosed in parentheses and set on the right margin. For example,

$$\psi(u) = \int_{o}^{T} \left[ \frac{1}{2} \left( \Lambda_{o}^{-1} u, u \right) + N^{*}(-u) \right] dt . \tag{1}$$

Please punctuate a displayed equation in the same way as ordinary text but with a small space before the end punctuation.

189	3.5 Program Code	189
190 191	Program listings or program commands in the text are normally set in typewriter font, e.g., CMTT10 or Courier.	190 191
192	Example of a Computer Program	192
193	program Inflation (Output)	193
194	{Assuming annual inflation rates of 7%, 8%, and 10%,	194
195	years};	19
196	const	190
197	<pre>MaxYears = 10;</pre>	19
198	var	198
199	Year: 0MaxYears;	199
200	Factor1, Factor2, Factor3: Real;	200
201	begin	20
202	Year := 0;	202
203	Factor1 := 1.0; Factor2 := 1.0; Factor3 := 1.0;	203
204	<pre>WriteLn('Year 7% 8% 10%'); WriteLn;</pre>	204
205	repeat	20!
206	Year := Year + 1;	200
207	Factor1 := Factor1 * 1.07;	20
208	Factor2 := Factor2 * 1.08;	208
209	Factor3 := Factor3 * 1.10;	209
210	WriteLn(Year:5,Factor1:7:3,Factor2:7:3,Factor3:7:3)	210
211	until Year = MaxYears end.	211
212	end.	212
213 214	(Example from Jensen K., Wirth N. (1991) Pascal user manual and report. Springer, New York)	213 214
215	3.6 Footnotes	21!
216	The superscript numeral used to refer to a footnote appears in the text either	210
217	directly after the word to be discussed or – in relation to a phrase or a sentence	21
218	- following the punctuation sign (comma, semicolon, or full stop). Footnotes	218
219	should appear at the bottom of the normal text area, with a line of about 2 cm	219
220	in T <sub>E</sub> X and about 5 cm in Word set immediately above them. <sup>2</sup>	220
221	3.7 Citations	221
222	The list of references is headed "References" and is not assigned a number in	222
223	the decimal system of headings. The list should be set in small print and placed	223
224	at the end of your contribution, in front of the appendix, if one exists. Please do	224
	<sup>2</sup> The footnote numeral is set flush left and the text follows with the usual word	

<sup>&</sup>lt;sup>2</sup> The footnote numeral is set flush left and the text follows with the usual word spacing. Second and subsequent lines are indented. Footnotes should end with a full stop.
